	Urgent	Not Urgent
Important	**Do - (Your MVP)** ● Function to get user input maps and points for that map ● Function to print out total number of maps and points that a user has ● Pandas database to store maps and points ● Function to print out all maps the user has completed (with point values) ● Text file to store user inputs (dataframe uses this file)	**Schedule - (For V2.0+)** ● Function to see weekly stats (maps completed in a certain week) ● Function to print out the hardest map difficulty that the user has completed ● Function to print out what date the user completed their first map of a certain difficulty (easy, main, hard, insane, extreme)
Not Important	**Delegate - (Use a library)** ● Use the Pandas library to create dataframes ● Use the datetime library for functions involving time (ex: weekly stats) ● Use NumPy for operations involving NaN values (ex: user doesn't input a value for points)	**Delete - (Cut it)** ● Points graph to show improvement over time ● Pulling data from the official KoG website (too buggy) ● Function to display a random map of a certain difficulty from a database of every map
